IGCSE ICT 0417

Papers and tips

Paper 1 - Theory

- **Read your textbook over and over again. And make sure you understand it.**
- **Do as much past papers as you can. The questions are repeated so much in different papers and you'll be able to how to respond with the question by spaming past papers.**

Paper 2, 3 - Practical

- **Read the ALL questions carefully.**
- **Highlight the questions that you've done with.**
- **Try to be more organized! Save all of your work in one folder and give a proper name.**
- **Be careful with the file extensions!**
- **It's fine to call for help from teacher during the exam if there are any technical issues.**

TIPS

Start working on your candidate number's computer. During the exam, you are unable to choose the computer. If your candidate number is 400 and it's the very first candidate number among 10th graders, your computer will the first computer and so on. Working on a computer that you've never experienced before is really hard to work because some of the computer loads so much!

TIPS

Just do past papers as much as you can. Sometimes you need to do past papers with the time to make sure that you can make it in time. When you're doing practical papers, do not forget to save your work. It'll be useful for you later. Always check yourself using mark scheme.

this YouTube channel will
be useful for you.

TIPS

Start doing theory paper at least two months before the exam. I started doing theory papers just a month ago and didn't get good grades, so I advice you to start doing early! Even the question you've faced in the exam is like you've never experienced before, don't worry. You should know the modal response for the question because you did so many past papers.
